## **DETAILED ACTION**

### **EXAMINER'S AMENDMENT**

An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it **MUST** be submitted no later than the payment of the issue fee.

Authorization for this examiner's amendment was given in a telephone interview with attorney Eric J. Nuss on 11 May 2009.

The application has been amended as follows:

Claim 1 is amended (near the end of the claim) to replace "exposing" with - - for - -, resulting in ... wherein the first passivation layer and the second passivation layer include a drain contact hole for a drain electrode, ....

### ***Claim Objections***

Objection to claim 1 is withdrawn.

***Allowable Subject Matter***

Claims 1-10, 15-24, and 29-36 are allowed.

The following is an examiner's statement of reasons for allowance:

Please see Board decision mailed 06 February 2009.

The closest combination is Applicant's Admitted Prior Art (APA) in view of Sakamoto et al (Sakamoto) USPAT 6,507,382 B1 and Kim USPAT 5,581,382.

APA discloses an in-plane switching liquid crystal display device comprising:  
first and second substrates, 30 and 32 respectively;  
a gate line, 50, arranged in one direction on the first substrate;  
a common line, 54, arranged on the first substrate;  
a gate insulation layer, 70, on the first substrate;  
a data line, 62, on the gate insulation layer;  
a first passivation layer, 74, on the gate insulation layer, and a plurality of common electrodes, 54a, an insulating layer over the common electrodes, and a plurality of pixel electrodes, 66a, on said insulating layer, wherein the plurality of common electrodes and the plurality of pixel electrodes are parallel to and [Applicant's "an"] space apart from each other; and

a liquid crystal layer between the first and second substrates..

Sakamoto teaches (entire patent, especially embodiment 2) in Drawings 3(a) and 3(b), the use of a gate insulating layer, 4, on the substrate, a common electrode, 3 (col. 8, line 23 through col. 10, line 7), on a protective overcoat layer, 12 (Applicant's the first passivation layer); an interlayer film, 13 (Applicant's second passivation layer) on the first passivation layer that includes a contact hole for connecting the pixel electrode (per Figure 3(b)); a pixel electrode, 14, on the second passivation layer; and wherein 12, 13, and 8 (Applicant's first passivation layer, second passivation layer, and an insulating protection film, respectively) includes a drain contact hole to electrically connect the pixel electrode to the drain (per Figure 3(B)) to allow for manufacture of a color display that prevents color unevenness for better display performance (col. 4, lines 1-2).

APA, Figure 6:

APA, Figure 7D:

Art Unit: 2871

Sakamoto :

FIG. 3(a)

Kim teaches a device wherein the second passivation layer is a nitride layer (Applicant's inorganic material) to prevent moisture penetration and resulting damage due to said moisture penetration (improves display service life) (col. 5, lines 30-48).

However, no prior art with proper motivation to combine was found to teach the missing limitations in the device as claimed.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

### ***Conclusion***
